EXTRACELLULAR (POTENTIAL).
                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE OF 646-799 FROM N.A., AND TISSUE SPECIFICITY.

MEDLINE-97231187; Pubmed-907682;

Quarles L.D., Hartle J.E. II, Siddhanti S.R., Guo R., Hinson T.K.;

A distinct cation-sensing mechanism in M3T3-El osteoblasts
J. Bone Miner. Res. 12:393-402(1997).

-!-FUNCTION: SENSES CHANGES IN THE EXTRACELLULAR CONCENTRATION OF
CALCIUM IONS. THE ACTIVATY OF THIS RECEPTOR IS MEDIATED BY A
G-PROTEIN THAT ACTIVATES A PHOSPHATIDYLINOSITOL-CALCIUM SECOND
MESSENGER SYSTEM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS; A (SHOWN HERE) AND B; ARE PRODUCED BY ALTERNATIVE SPLICING.
-!- TISSUE SPECIFICITY: EPIDERMIS, KIDNEY AND CARTILAGE.
-!- SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                VII (FOTENTIAL).

                   MAY MEDIATE SUPPRESSION OF NEUROTRANSMISSION OR MAY BE INVOLVED IN SYNAPTICE STABILIZATION.
SYNAPTICE STABILIZATION.
SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: IS WIDELY DISTRIBUTED IN THE CNS AND PROMINENT EXPRESSION IS SEEN IN GOLGI CELLS OF THE CEREBELLUM AND SOME PARTICULAR NEURONAL CELLS IN OTHER BRAIN REGIONS.
SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
STRONGEST, TO MGLURA.

THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY A G-PROTEIN THAT ACTIVATES A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM. MAY PARTICIPATE IN THE CENTRAL ACTION OF GLUTAMATE IN THE CRS, SUCH AS LONG-TERM POTENTIATION IN THE HIPPOCAMPUS AND LONG-TERM DEPRESSION IN THE CEREBELLUM. SUBCELLULAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                            417

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The Journal of the pattern of calcium release in Xenopus ocytes.

The pin J.-P., Waeber C., Prezeau L., Bockaert J., Heinemann S.F.;

The Alternative splicing generates metabotropic glutamate receptors inducing different patterns of calcium release in Xenopus ocytes.";

Proc. natl. Acad. Sci. U.S.A. 89:1031-10335(1992).

-!- FUNCTION: RECEPTOR FOR GLUTAMATE. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY A G-PROTEIN THAT ACTIVATES A PHOSPHATIDYLINOSITOL.

CALCIUM SECOND MESSENGER SYSTEM. MAY PARTICIPATE IN THE CENTRAL ACTION OF GLUTAMATE IN THE CR.S. SUCH AS LONG-TERM POPENTIATION IN C. IS UBCELLULAR LOCATION: Integral membrane protein.

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- ALTERNATIVE PRODUCTS: 3 ISOFORMS; IA (SHOWN HERE), ARE PRODUCED BY ALTERNATIVE SPLICING. 1B AND 1C ARE C-TERMINALLY TRUNCATED FORMS OF 1A.

-!- TISSUE SPECIFICITY: IS PREDOMINANTLY EXPRESSED IN CEREBELLAR PURKING CELLS, CA2-CA3 PYRAMIDAL CELLS OF THE IIPPOCAMPUS, AND MITRAL AND TUFFED CELLS OF THE OLFACTORY BULB.
                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: IS WIDELY DISTRIBUTED IN THE CNS. PREDOMINAN
ENTRESSION IS SEEN IN THE NEURONAL CELLS OF THE CEREBRAL CORTEX,
DENTRYE GYRUS, AND GLIAL CELLS THROUGHOUT BRAIN REGIONS.
SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: RECEPTOR FOR GLUTAMATE. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY A G-PROTEIN THAT INHIBITS ADENYLATE CYCLASE
